DETAILED ACTION

1. Applicant's amendment, filed on 7/29/03, is acknowledged.
2. The numbering of claims is not in accordance with 37 CFR 1.126 which requires the original numbering of the claims to be preserved throughout the prosecution. When claims are canceled, the remaining claims must not be renumbered. When new claims are presented, they must be numbered consecutively beginning with the number next following the highest numbered claims previously presented.

Misnumbered claims 11-20 have been renumbered as claims 15-24 according to 37 CFR 1.126.

3. Claims 11-24 are pending and being acted upon presently.

Election/Restrictions

4. Restriction is required under 35 U.S.C. 121 and 372.

This application contains the following inventions or groups of inventions which are not so linked as to form a single general inventive concept under PCT Rule 13.1.

5. In accordance with 37 CFR 1.499, applicant is required, in response to this action, to elect a single invention to which the claims must be restricted.

- I. Claims 11-12 and 24, drawn to a membrane of a recombinant host cell expressing a polypeptide comprising the amino acid of SEQ ID NO: 2 classified in Class 530, subclasses 359.
- II. Claim 13, drawn to an isolated polynucleotide comprising the polynucleotide of SEQ ID NO:3 encoding SEQ ID NO:4, classified in Class 536, subclass 23.5.
- III. Claim 14, drawn to a polypeptide comprising the amino acid sequence of SEQ ID NO:4 encoded by SEQ ID NO: 3, classified in Class 530, subclasses 395.
- IV. Claims 15-18 and 21-23, drawn to an isolated polynucleotide comprising the nucleotide sequence of SEQ ID NO:1, an expression vector, an isolated host cell, and a process of producing, classified in Class 536, subclass 23.5; Class 435, subclasses 69.1, 455, 252.3, and 320.1.

Art Unit: 1644

- V. Claims 19-20, drawn to a polypeptide comprising the amino acid sequence of SEQ ID NO:4 encoded by SEQ ID NO: 2, classified in Class 530, subclasses 395.

6. Groups I-V are different products. Nucleic acids, polypeptides, and membranes of a recombinant host cell differ with respect to their structures and physicochemical properties; therefore each product is patentably distinct.

7. These inventions are distinct for the reasons given above. In addition, they have acquired a separate status in the art as shown by different classification and/or recognized divergent subject matter. Further, even though in some cases the classification is shared, a different field of search would be required based upon the structurally distinct products recited and the various methods of use comprising distinct method steps. Therefore restriction for examination purposes as indicated is proper. Further, a prior art search also requires a literature search. It is an undue burden for the examiner to search more than one invention.

7. Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

8. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Maher Haddad whose telephone number is (571) 272-0845. The examiner can normally be reached Monday through Friday from 7:30 am to 4:00 pm. A message may be left on the examiner's voice mail service. If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Christina Chan can be reached on (571) 272-0841. The fax number for the organization where this application or proceeding is assigned is 571-273-8300.
